US striker Christian Ramirez has arrived from Houston Dynamo. Aberdeen have completed ... in the States but has become Stephen Glass' sixth signing of the summer, subject to securing a visa.

DYNAMO is a computer language for simulating models of business, economic, social, biological, and engineering systems. It permits easy communication with the computer and easier communication among modelers and can be mastered by non-programmers in days rather than the weeks or months required for most languages. The sixth edition of the DYNAMO User's Manual introduces the basic DYNAMO language, includes a reference manual for DYNAMO II with an expanded section on macros and documents all the improvements that have been made to DYNAMO III since it was completed in 1976, Experience with this system has led to changes which make the array feature even more useful than before in the construction of large; disaggregated models. The Manual introduces DYNAMO IV, with its improved integration method, and describes Gaming DYNAMO. Typical errors in model construction (and their corrections) are presented, along with a complete list of DYNAMO error messages. This edition also includes the new DOCUMENTOR program which produces annotated model listing, crossreferences, and indices. DYNAMO compilers are available both in versions specific to the IBM/370 and in versions written in ANS FORTRAN.

This book is the result of a research project entitled "Reference function for Global Air Pollution/CO₂" initiated by RIVM. It deals with the description of a computer simulation model of the greenhouse effect. This model, IMAGE, tries to capture the fundamentals of the complex problem of climate change in a simplified way. The model is a multidisciplinary product and is based on knowledge from disciplines as economics, atmospheric chemistry, marine and terrestrial biogeochemistry, ecology, climatology, and glaciology. This book might be of interest for anyone working in the broad field of climate change. Furthermore, it can be useful for model builders, simulation experts, mathematicians etc. A PC version of the model will become available free of charge. Requests can be sent to the author. Although being the only author of this book, I could never have written it without the help of many other people. First of all I would like to thank Koos Vrieze, originally a colleague at RIVM, later my professor. Without his inspiring attitude I would have never finished this thesis. I am also very grateful to RIVM for giving me the opportunity to write this thesis. I owe many thanks to Hans de Boois and Rob Swart for their support and assistance during the research. Furthermore, I would like to thank my trainees who have substantially contributed to the contents of this book.
