Endo-perio lesions might be interdependent because of the vascular and anatomic connections between the pulp and the periodontium. The aim of this study is to emphasise that primary endodontic lesion heals after a proper instrumentation, disinfection and sealing of the endodontic space.

Abstract The interrelationship between periodontal and endodontic disease has

# Bookmark File PDF Endo Periodontal Lesions

aroused confusion, queries and controversy. Differentiating between periodontal and endodontic problems can be difficult. A symptomatic tooth may have pain of periodontal and/or pulpal origin.

Three main pathways have been implicated in the development of periodontal – endodontic lesions: apical foramen, lateral and accessory canals, and dentinal tubules. The main cause of the periodontal lesions is the presence of bacterial plaque formed by aerobic and anaerobic microorganisms.
