Why do people choose the careers they do? What factors cause people to be satisfied with their work? No single work did more to make concepts like motive, goal incentive, and attitude part of the workplace vocabulary. This landmark work, originally published in 1964, integrates the work of hundreds of researchers in individual workplace behavior to explain choice of work, job satisfaction, and job performance. Includes an extensive new introduction that highlights and updates his model for current organization behavior educators and students, as well as professionals who must extract the highest levels of productivity from today's downsized workforces.

The concepts of potential output and the output gap are central to the IMF's analytical work in providing policy recommendations to member governments. This key role has stimulated research at the IMF to develop and refine estimation techniques. This paper summarizes the methodology and results of IMF research on potential output, which has focused mainly on the industrial countries but more recently has addressed issues related to developing countries and countries in transition. It then discusses the approaches that country desk officers use for operational purposes, and presents estimates of potential output for the major industrial countries.

This book has been written to provide a current, practical, Australian-based approach to designing and developing curriculum. The demands of schools and educational systems today are such that teachers with practical curriculum skills are highly valued and this book provides a vital source for teachers who wish to build their skills in the field of curriculum design and development. The book addresses the

needs of curriculum developers by examining the nature of the curriculum process and how it can be applied in schools. A particular strength is the way in which the chapters are structured around a model of curriculum development. As the model unfolds the reader is familiarised with the various elements of curriculum including situational analysis, intent, content, learning activities and evaluation. Teachers will appreciate the value of understanding these elements and in so doing will acquire valuable skills of curriculum design and development. A feature of this book is that it addresses the issues of curriculum implementation and curriculum change. To devise a curriculum document in these times is tough enough. Those who wish to see their curricula succeed must be involved with implementing that curriculum and the curriculum change that results. This important new book is particularly appropriate to classroom teachers, system developers and student teachers studying curriculum.

This book is generally about public administration and particularly about new public administration, a product of the turbulent late 1960s and the 1970s.

Using three distinct approaches—statistical filtering, production function, and multivariate model— this paper estimates potential growth for China, India, and five ASEAN countries (Indonesia, Malaysia, the Philippines, Thailand, and Vietnam) during 1993–2013. The main findings include: (i) both China and India have recently exhibited a slowdown in potential growth, largely reflecting a decline of total factor productivity (TFP) growth; (ii) by contrast, trend growth for the five ASEAN countries has been rather stable and might even have increased marginally, with the notable exception of Vietnam;(iii) over the longer term, demographic factors will be much more supportive in India and some ASEAN economies than in China, where working-age population should start shrinking, with the overall dependency ratio climbing by the end of this decade. Improving or sustaining potential growth calls for broad structural reforms.

Out of sight of most Americans, global corporations like Nestlé, Suez, and Veolia are rapidly buying up our local watersources—lakes, streams, and springs—and taking control of public water services. In their drive to privatize and commodify water, they have manipulated and bought politicians, clinched backroom deals, and subverted the democratic process by trying to deny citizens a voice in fundamental decisions about their most essential public resource. The authors' PBS documentary Thirst showed how communities around the world are resisting the privatization and commodification of water. Thirst, the book, picks up where the documentary left off, revealing the emergence of controversial new water wars in the United States and showing how communities here are fighting this battle, often against companies headquartered overseas. Patients with acute critical illness are often cared for initially in the ED, and the beginning actions can help alter outcomes hours, day and months later. This handbook targets selected common or high risk critical condition or therapies needed to optimize ED care, using the newest research and experiences from respected authors.

"a book for all practitioners and all members of the greater community. Giroux demands reader involvement, transformation, and empowerment. He helps us understand that the political relationship between schools and society is neither artificial nor neutral nor necessarily negative. Rather, school personnel have a positive and dynamic political role to play." Educational Leadership "We are fortunate to have these ideas expressed so clearly and in one place. It is a very useful book. . . ." Choice "Offers educators ways for reflecting critically on their own practices and the relationship between schools and society." The Educational Digest
