The construction industry has not had a good record on health and safety and faces tough legal and financial penalties for breaches of the law. This book provides a unique resource for all those who construct or procure the construction of projects of all sizes and in all countries and for clients who need to keep abreast of their own and their contractors' responsibilities. It gives practical guidance on best practice, including: measuring performance and recording information developing a safety policy and method statements assessing risk training and understanding people the basics of the construction/environment interface The book addresses several topics not found in other reference works, discussing techniques of health and safety and basic environmental management as applied to the industry. It uniquely provides 50 quick reference guides setting out solutions to common problems. These include falls, manual and mechanical handling, work with asbestos and noise. It also summarises the main UK legal requirements on construction safety and health and includes a number of useful checklists and model forms. Written by a very experienced health and safety practitioner, who is also author of the highly successful IOSH book Principles of Health and Safety at Work, this book will be welcomed by all responsible for health and safety. It will also provide an excellent text for the NEBOSH (National Examination Board in Occupational Safety and Health) Construction Safety and Health national certificate.

This much anticipated new edition provides employers and employees with a day-to-day guide to reducing accidents and injuries, ensuring compliance, avoiding fines and penalties, and controlling workers' compensation costs. You'll not only find comprehensive discussions on all of the construction safety regulations found in the Code of Federal Regulations (CFR) Title 29 Chapter 1926, but you'll also find the actual legal text of the regulations and overviews for each sub Chapter for easier reference. This Construction Safety Handbook covers both the obvious and the hidden dangers of construction and addresses the latest changes in OSHA standards, including new recordkeeping requirements, new ergonomic guidelines, new requirements in the Steel Erection standard, and new additions to signs, signals, and barricades requirements. Written in plain English, this comprehensive handbook provides you with the legal background, practical advice, and ready-to-use written compliance programs you need to ensure your sites meet workplace safety requirements, protect workers, and comply with the standards. Each Chapter provides a description of the requirements of the standard, and a sample written compliance program, checklists, and the appropriate citations from the 29 CFRs. The latest changes in enforcement and inspection policy are also detailed, and a list of OSHA's most frequently cited construction standards is given.

Written for members of the construction industry and any industry where fall hazards exist, this reference book/self-study guide features more than 250 original illustrations of the 29 CFR Parts 1910 and 1926 requirements. These illustrations allow foremen, managers, and others responsible for overseeing compliance to quickly and easily understand and apply the standards and procedures that appear in more than 120 pages of official, legal text. Readers will gain an understanding of the scope and range of fall hazards and the prevailing methods available to control them. Fall Protection and Scaffolding Safety begins with a short, practical overview of OSHA standards and an overview of fall protection principles. The author then focuses on engineering controls, which are "considered the most effective, followed by administrative controls and personal protective equipment." The book explains OSHA standards for guarding open-sided walking and working surfaces and standards related to protection against falling objects. The remainder of the book discusses various types of personal protective equipment and guidelines for adjustment, use, and care. It also examines four specific types of fall exposures: scaffolding; ladders; elevating and rotating work platforms, personnel hoists, and personnel platforms elevated by forklifts or cranes; and special trades.
