Of the more modern feuds, Jonas Salk versus Albert Sabin is a classic, the great argument being whether the most efficacious vaccine for poliomyelitis contained a killed or a debilitated virus. Both men's work saved countless thousands of lives, but neither received a Nobel prize nor were they reconciled to each other.

The only interesting story was the Salk vs. Sabin "feud", which was covered nicely, but others were a chore to read. It doesn't seem to me that the feud between Semmelweis and the Viennese Medical Establishment was so important as to be among the 10 feuds. The writing was not done in a way as to hold the reader's interest.

The dramatic stories of ten historic feuds: How they altered the course of discovery-and shaped the modern world Hall Hellman tells the lively stories of ten of the most outrageous and intriguing disputes from the seventeenth to the twentieth centuries. Bringing the cataclysmic clash of ideas and personalities to colorful life, Hellman explores both the science and the spirit of the times. Along the way, he reveals that scientific feuds are fueled not only by the purest of intellectual disagreements, but also by intransigence, ambition, jealousy, politics, faith, and the irresistible human urge to be right. Unusual insight into the development of science . . . I was excited by this book and enthusiastically recommend it to general as well as scientific audiences. -American Scientist Hellman has assembled a series of entertaining tales. . . . many fine examples of heady invective without parallel in our time. -Nature An entertaining and informative account of the unusual personalities and sometimes bitter rivalries of some of the world's greatest scientific minds. -Publishers Weekly A fascinating new book which details some of the most famous disputes of the ages.-Courier Mail Dry science history turns into entertaining reading without sacrificing historical accuracy. -The Christchurch Press Great Feuds in Science is wonderful history, as the reader learns how scientists had to fight with religious leaders and other scientists to get their work recognized, accepted, and even get the credit for it! -Bookviews

From Descartes battling Fermat for the honour of inventing analytic geometry, to Poincaré wrangling with Russell over the logical foundations of mathematics, this text provides a fascinating look behind the numbers game.

Examines ten of technology's greatest disputes and controversies, including who invented the miner's safety lamp, the first successful flying machine, and the television.

Looks at the animosities, ill feelings, and bad behavior of such public figures as Queen Elizabeth I, Aaron Burr, the Duchess of Windsor, Lyndon B. Johnson, and J. Edgar Hoover.

Bringing together the experience, perspective and expertise of Paul Farmer, Jim Yong Kim, and Arthur Kleinman, Reimagining Global Health provides an original, compelling introduction to the field of global health. Drawn from a Harvard course developed by their student Matthew Basilico, this work provides an accessible and engaging framework for the study of global health. Insisting on an approach

that is historically deep and geographically broad, the authors underline the importance of a transdisciplinary approach, and offer a highly readable distillation of several historical and ethnographic perspectives of contemporary global health problems. The case studies presented throughout *Reimagining Global Health* bring together ethnographic, theoretical, and historical perspectives into a wholly new and exciting investigation of global health. The interdisciplinary approach outlined in this text should prove useful not only in schools of public health, nursing, and medicine, but also in undergraduate and graduate classes in anthropology, sociology, political economy, and history, among others.

"Dr. Paul Farmer is one of the most extraordinary people I've ever known. *Partner to the Poor* recounts his relentless efforts to eradicate disease, humanize health care, alleviate poverty, and increase opportunity and empowerment in the developing world. It will inspire us all to do our parts."--William J. Clinton "If the world is curious about Paul Farmer, there is a reason for that. No one has done more than he has in bringing modern medicine to the poor across the globe and no one has exceeded him in making us appreciate the diverse barriers that prevent proper medicine from reaching the underdogs of the world. In this wonderful collection of essays, putting together Paul Farmer's writings over more than two decades, we can see how his far-reaching ideas have developed and radically enhanced the understanding of the challenges faced by healthcare in the uneven world in which we live. This is an altogether outstanding book."--Amartya Sen, Nobel Laureate, Economics "To delve into these pages is to join one of the world's great explorers on an epic life journey--to grapple with culture, poverty, disease, health care, ethics, and ultimately our common humanity in the Age of AIDS. Paul Farmer is a pioneer, guide, and inspiration at a time of unprecedented contrasts: between wealth and poverty, power and powerlessness, health and disease, compassion and neglect. His medical expertise, anthropological vision, and unflinching decency have helped to recharge our world with moral purpose."--Jeffrey D. Sachs, Columbia University "Wow! Perfect for teaching. This is more than vintage Farmer. Editor Haun Saussy knows Farmer's work inside out and has assembled and organized 25 classic articles that project the heart of Farmer's brilliant, radical, inspiring, eminently practical and (dare I say) genuinely subversive work."--Philippe Bourgois, author of *Righteous Dopefiend* "If they gave Nobel Prizes for raising moral awareness, Paul Farmer would have won his a long time ago. For several decades now, his work has posed a challenge to anyone who dares say that radically improving the health of the world's poor can't be done. This splendid compilation of the best of his work allows us to follow a restless, creative, compassionate mind in action, in and out of prisons and barrios and mud huts and hospital wards, from Haiti to Rwanda to Moscow, never taking 'no' for an answer."--Adam Hochschild, author of *Bury the Chains* "Paul Farmer is a deep scholar of Haitian society, a formidable medical anthropologist,

an implacable theorist of structural violence and health as a human right, and an ethicist for whom the place of social justice in medicine and in the world is an existential need. This book is the platform of interconnected intellectual, academic, and practical engagements upon which the amazing, world-transforming life of Farmer stands."--Arthur Kleinman, author of *What Really Matters: Living a Moral Life amidst Uncertainty and Danger* "This collection shows the impressive catalytic effects of original scholarship when combined with action, activism, and a commitment to social justice in health. Paul Farmer and his PIH colleagues have twice changed World Health Organization policies; they continue to have a lasting impact on the global health movement and on the lives of the poor."--Peter Brown, Emory University

The author takes readers deep into the heart of genetically engineered food revealing the depth of its influence on our lives, discussing corn, potatoes, squash, papaya, soybeans, and much more.

A behind-the-scenes study of the work of New York City's Office of the Chief Medical Examiner looks at some of the most important and unusual cases the OCME has handled since its inception in 1918, ranging from political intrigue and high-profile murder cases to vicious gang wars and the September 11th terrorist attacks.
