The adoption and enforcement of national laws to address and punish all forms of violence against women and girls, in line with international human rights standards, is one of the five key outcomes which the Secretary-General's campaign "UNiTE to End Violence against Women" aims to achieve in all countries by 2015. In May 2008, the United Nations Division for the Advancement of Women of the Department of Economic and Social Affairs (UNDAW/DESA) and the United Nations Office on Drugs and Crime (UNODC) organized an expert group meeting in Vienna, Austria, on good practices in legislation on violence against women. That meeting prepared a model framework for legislation on violence against women, including detailed recommendations, commentaries and examples of promising practices. The framework contained two types of recommendations: those that are applicable to all forms of violence against women; and those that are specific to domestic violence or sexual violence. In 2009, based on the work of the expert group meeting in Vienna, UNDAW/DESA developed a Handbook for Legislation on Violence against Women. This Handbook, with a foreword by Deputy Secretary-General, Dr. Asha-Rose Migiro, intends to provide all stakeholders with detailed guidance to support the adoption and effective implementation of legislation which prevents violence against women, punishes perpetrators, and ensures the rights of survivors everywhere. It is specifically hoped that the Handbook will be of use to government officials, parliamentarians, civil society, staff of United Nations entities and other actors in their efforts at ensuring that a solid legal basis is in place for tackling the scourge of violence against women.

This handbook provides a comprehensive treatise of the concepts and nature of technology-facilitated gendered violence and abuse, as well as legal, community and activist responses to these harms. It offers an inclusive and intersectional treatment of gendered violence including that experienced by gender, sexuality and racially diverse victim-survivors. It examines the types of gendered violence facilitated by technologies but also responses to these harms from the perspectives of victim advocates, legal analyses, organisational and community responses, as well as activism within civil society. It is unique in its recognition of the intersecting drivers of inequality and marginalisation including misogyny, racism, colonialism and homophobia. It draws together the expertise of a range of established and globally renowned scholars in the field, as well as survivor-advocate-scholars and emerging scholars, lending a combination of credibility, rigor, currency, and innovation throughout. This handbook further provides recommendations for policy and practice and will appeal to academics and students in Criminology, Criminal Justice, Law, Socio-Legal Studies, Politics, as well as Women's and/or Gender Studies.

Focuses on digital violence and discrimination, cybercrime, digital transformation, and practices and studies related to digital violence. The book introduces and guides users through current best practices, laboratory methods, policies, protocols, and more within international digital violence and discrimination.

This 42 chapter volume represents the state of the art in visual research. It provides an introduction to the field for a variety of visual researchers: scholars and graduate students in art, sociology, anthropology, communication, education, cultural studies, women's studies, ethnic studies, global studies and related social science and humanities disciplines. The SAGE Handbook of Visual Research Methods encompasses the breadth and depth of the field, and points the way to future research possibilities. It illustrates "cutting edge" as well as long-standing and recognized practices. This text is not only "about" research, it is also an example of the way that the visual can be incorporated in data collection and the presentation of research findings. Contributors to the book are from diverse backgrounds and include both established names in the field and rising stars. Chapters describe a methodology or analytical framework, its strengths and limitations, possible fields of application and practical guidelines on how to apply the method or technique. The Sage Handbook of Visual Research Methods is organized into seven main sections: I) Framing the Field of Visual Research II) Producing Visual Data and Insight III) Participatory and Subject-Centered Approaches IV) Analytical Frameworks and Approaches V) Vizualization Technologies and Practices VI) Moving Beyond the Visual VII) Options and Issues for Using and Presenting Visual Research

Digital violence continues to increase, especially during times of crisis. Racism, bullying, ageism, sexism, child pornography, cybercrime, and digital tracking raise critical social and digital security issues that have lasting effects. Digital violence can cause children to be dragged into crime, create social isolation for the elderly, generate inter-communal conflicts, and increase cyber warfare. A closer study of digital violence and its effects is necessary to develop lasting solutions. The Handbook of Research on Digital Violence and Discrimination Studies introduces the current best practices, laboratory methods, policies, and protocols surrounding international digital violence and discrimination. Covering a range of topics such as abuse and harassment, this major reference work is ideal for researchers, academicians, policymakers, practitioners, professionals, instructors, and students.

The ebook edition of this title is Open Access and freely available to read online This handbook features theoretical, empirical, policy and legal analysis of technology facilitated violence and abuse (TFVA) from over 40 multidisciplinary scholars, practitioners, advocates, survivors and technologists from 17 countries

This second, thoroughly updated edition of The Routledge International Handbook of Children, Adolescents, and Media analyzes a broad range of complementary areas of study, including children as media consumers, children as active participants in media making, and representations of children in the media. The roles that media play in the lives of children and adolescents, as well as their potential implications for their cognitive, emotional, social, and behavioral development, have attracted growing research attention in a variety of disciplines. This handbook presents a collection that spans a variety of disciplines including developmental psychology, media studies, public health, education, feminist studies, and the sociology of childhood. Chapters provide a unique intellectual mapping of current knowledge, exploring the relationship of children and media in local, national, and global contexts. Divided into five parts, each with an introduction explaining the themes and topics covered, the handbook features over 50 contributions from leading and upcoming academics from around the globe. The revised and new chapters consider vital questions by analyzing texts, audience, and institutions, including: media and its effects on children’s mental health children and the internet of toys media and digital inequalities news and citizenship in the aftermath of COVID-19 The Handbook’s interdisciplinary approach and comprehensive, current, and international scope make it an authoritative, state-of-the-art guide to the field of children’s media studies. It will be indispensable for media scholars and professionals, policy makers, educators, and parents.

This SAGE Handbook presents contemporary, cutting-edge approaches to participatory research and inquiry. It has been designed for the community of researchers, professionals and activists engaged in interventions and action for social transformation, and for readers interested in understanding the state of the art in this domain. The Handbook offers an overview of different influences on participatory research, explores in detail how to address critical issues and design effective participatory research processes, and provides detailed accounts of how to use a wide range of participatory research methods. Chapters cover pioneering new participatory research techniques including methods that can be operationalised at scale, approaches to engaging the poorest and most marginalised, and ways of harnessing technologies to increase the scope of participation, amongst others. Drawing upon a wide range of disciplines, and bringing together contributing authors from across the globe, this Handbook will be of interest to an international readership from across the broad spectrum of social sciences, including social policy, development studies, geography, sociology, criminology, political science, health and social care, education, psychology, business & management. It will also be an insightful and practical resource for facilitators, community workers, and activists for social change. Part 1: Introduction Part 2: Key Influences and Foundations of Participatory Research Part 3: Critical Issues in the Practice of Participatory Research Part 4: Methods and Tools Part 4.1: Dialogic and Deliberative Processes Part 4.2: Digital Technologies in Participatory Research Part 4.3: Participatory Forms of Action Orientated Research Part 4.4: Visual and Performative Methods Part 4.5: Participatory Monitoring, Evaluation and Learning Part 4.6: Mixing and Mashing Participatory and Formal Research Part 5: Final Reflections

Doing research is an ever-changing challenge for social scientists. This challenge is harder than ever today as current societies are changing quickly and in many, sometimes conflicting, directions. Social phenomena, personal interactions, and formal and informal relationships are becoming more borderless and disconnected from the anchors of the offline “reality.” These dynamics are heavily marking our time and are suggesting evolutionary challenges in the ways we know, interpret, and analyze the world. Internet and computer-mediated communication (CMC) is being incorporated into every aspect of daily life, and social life has been deeply penetrated by the internet. This is due to recent technological developments that increase the scope and range of online social spaces and the forms and time of participation such as Web 2.0, which widened the opportunities for user-generated content, the emergence of an “internet of things,” and of ubiquitous mobile devices that make it possible to always be connected. This implies an adjustment to epistemological and methodological stances for conducting social research and an adaption of traditional social research methods to the specificities of online interactions in the digital society. The Handbook of Research on Advanced Research Methodologies for a Digital Society covers the different strands of methods most affected by the change in a digital society and develops a broader theoretical reflection on the future of social research in its challenge to always be fitting, suitable, adaptable, and pertinent to the society to be studied. The chapters are geared towards unlocking the future frontiers and potential for social research in the digital society. They include theoretical, epistemological, and ontological reflections about the digital research methods as well as innovative methods and tools to collect, analyze, and interpret data. This book is ideal for social scientists, practitioners, librarians, researchers, academicians, and students interested in social research methodology and its developments in the digital scenario.
