Breeding: Best Mare Management Practices – The Horse

For breeding, the stallion should be fitted with a well-adjusted halter with large rings that allow the chain shank to freely slide. During breeding, the stallion should be controlled adequately to prevent injury to the mare. After breeding, the penis can be rinsed with warm water to reduce contamination from the mare's genital tract.

This page is a list of horse and pony breeds, and also includes terms for types of horse that are not necessarily standardized breeds but are often labeled as breeds. While there is no scientifically accepted definition of the term "breed", a breed is generally defined as having distinct true-breeding characteristics over a number of generations. Its members may be called "purebred".

Horse breeding is reproduction in horses, and particularly the human-directed process of selective breeding of animals, particularly purebred horses of a given breed. Planned matings can be used to produce specifically desired characteristics in domesticated horses. Furthermore, modern breeding management and technologies can increase the rate of conception, a healthy pregnancy, and successful foaling.

Practical information on the reproductive management of both thoroughbred and warmblood breeding operations prepares horse breeders to effectively breed even problem mares and stallions.

The third edition of this highly successful textbook is updated throughout and includes more recent experimental work and updated references, including a new chapter on the significant developments in embryo technology. Covering the anatomy and physiology of the mare and the stallion, this comprehensive text goes on to study how this knowledge can be applied to the successful breeding of horses, maximizing both productivity and animal welfare.

Although there are many publications which discuss the history of the ancient horse, few focus their attention on the origin and development of the various breeds. Most publications examine the horse's contribution to human history through its role as transport facilitator and military machine, and concentrate mainly on subjects such as the origin and development of chariot and cavalry equipment and changes in military tactics over time. This book examines what happened when humans took the horse from the wild and domesticated it for their own use. This focus was taken as it was felt that the understanding of the huge role which the horse played in human history can only be improved by gaining an understanding of the equally huge role which humans played when they took horses from the wild and, through many hundreds of years of daily interaction, cross-breeding, and training, facilitated the development and spread of many breeds across the ancient world. This book takes as its chronological focus the Greco-Persian world of the second and first millennia BC. This time period was selected for examination as it was during these two millennia that the vital role which the horse was to play in human history became fully apparent. The second millennium BC saw the development of the vast chariot forces which were to form an important part of the

armed forces of numerous lands, from Mycenaean Greece in the West to India and China in the far East, while the following millennium saw the gradual replacement of chariots with cavalry forces, which continued to play a vital role in military warfare right up until the beginnings of the twentieth century AD. Part One traces the history of the horse from its evolution to the development and spread of chariot and cavalry forces. Parts Two and Three examine the famous horse-breeding regions of the ancient world and, through an analysis of archaeological, iconographical, and literary evidence, attempts to determine why these regions were famed for horse breeding and what were the physical characteristics and given attributes of the various breeds.

The fourth edition of this popular textbook provides a comprehensive account of how to successfully breed horses. Updated throughout, the new edition will cover techniques such as cloning, intra-cytoplasmic sperm injections (ICSI), in vitro fertilisation (IVF) and related reproductive technology that is currently being developed. This book also looks at reproductive anatomy, endocrine control and selection for breeding mares and stallions, and pregnancy, parturition and lactation in the mare. This classic textbook is required reading for many equine science and related courses, particularly in the UK.

Editors Ed Gorman and Martin H. Greenberg have scoured the world to present the biggest and most consistently entertaining collection of crime and suspense stories from across the globe. Their first-rate picks are a diverse and exciting mix of stories by big names, award winners, and fresh voices. The anthology will have the year's Edgar Award -winning stories, Silver Dagger Award-winning stories from the U.K., and spine-tingling tales from writers who might soon win those awards themselves. This volume is a feast of more than thirty gripping tales from bestselling authors, including Doug Allyn, Jeff Abbott, Marion Arnott, Rhys Bowen, Liza Cody, Shelley Costa, Mat Coward, Judith Cutler, Catherine Dain, Carol Anne Davis, Brendan DuBois, Elizabeth Foxwell, David Edgerly Gates, Jeremiah Healy, Edward D. Hoch, Clark Howard, Robert Levinson, Dick Lochte, John Lutz, Antony Mann, Sharyn McCrumb, Joyce Carol Oates, Chris Rippen, Peter Robinson, Kristine Kathryn Rusch, and Marcia Talley. This is the anthology of choice for every fan of suspense fiction whether they love cozies, hardboiled, or any shade in between. At the Publisher's request, this title is being sold without Digital Rights Management Software (DRM) applied.

Examines horse breeding around the world during the period. Looks at methods and techniques in sedentary and mobile economies, concentrating mainly on the Middle Ages, but the ideas of classical authors are assembled fully for comparison with those of medieval Arab and non-Arab authors. A conclusion

The contents of this volume were written to provide a basic understanding of the production, care and biology of the horse. It covers the history of the horse throughout evolution, as well as the development of the modern day breed. The principle of successful management is also dealt with, discussing such matters as how to select the horse, the relationship of conformation to movement, behavior, reproduction, the newborn foal, nutrition, footcare and parasite control. The book's extensive coverage of the care and potential problems of the newborn foal is rare, as is its indepth information on evolution. Each chapter was written by an expert in the topic covered. The chapter on nutrition presents the latest data on nutrient requirements and how to avoid problems in this area. Hence this volume should be of value to horse-owners and handlers as well as to animal scientists.
