The authors wrote the book as a result of providing training and advice to regulators and market practitioners worldwide - particularly in emerging markets - and finding that there was no generic international guide to understanding the investment fund business and its regulation and operation. [Hedge Funds, Risiken und Regulierung] Bei diesem Buch handelt es sich um den Einführungsband der Schriftenreihe des Institute for Law and Finance. Er enthält die Beiträge der ILF/DAI-Konferenz, die im Mai 2003 unter dem Titel "Hedge Funds: Risiken und Regulierung" stattfand. Die Beiträge diskutieren die wirtschaftlichen Merkmale von Hedge Funds und Strategien der Regulierung von Fonds. Die ersten beiden Aufsätze untersuchen Hedge Funds aus ökonomischem Blickwinkel. Alexander M. Ineichen, Geschäftsführer und Leiter von AIS Research bei UBS, erläutert die ökonomische Realität von Hedge Funds frei von den Mythen, die sich um sie gerankt haben. Im Anschluss stellt Franklin R. Edwards, Professor und Direktor des Zentrums für das Studium von Zukunftsmärkten an der Columbia Business School in New York, dar, wie die Regulierung von Hedge Funds auf ihre ökonomische Kernrealität, die Ziele finanzieller Stabilität und des Schutzes der Investoren zugeschnitten sein müsste. Als nächste stellen Marcia L. MacLurg, Partnerin bei Debevoise & Plimpton LLP, Ashley Kovas, Manager in der Abteilung für Businessstandards der Finanzdienstleistungsbehörde in London, und Edgar Wallach, Partner von Hengeler Mueller, den Stand der relevanten Regulierungsstrukturen in den Vereinigten Staaten, in Großbritannien und in Deutschland vor. Das Buch schließt mit einer Analyse der Geschäftsstrukturen, die auf deutsche Hedge Funds angewendet werden, verfasst von Kai-Die Steck, einem Mitglied der German Asset Management practice group der Shearman & Sterling LLP.

Investment management refers to the professional asset management of various securities such as shares and bonds as well as other assets like real estate. It aims to meet the specified investment goals for benefitting the investors. Institutions such as insurance companies, pension funds, corporations and charities can be investors. People who invest directly or through investment contracts and through collective investment schemes are termed as private investors. The investment management of investment funds is referred to as asset management or fund management. Some of the major areas of focus within this field are asset allocation, diversification and long-term returns. This textbook attempts to understand the multiple branches that fall under the discipline of investment management and how such concepts have practical applications. It explores all the important aspects of this field in the present day scenario. This book will provide comprehensive knowledge to the readers.

Collective investment schemes have always been a resort for non-sophisticated investors. Actively-managed mutual funds are among the most popular Collective investment schemes. These investments combine the investor's money with that of other investors, which is then used by a fund manager to pursue one or more investment objectives, such as long-term growth or income, by purchasing stocks and bonds from many different markets. The value of these investments fluctuates according to the investments held within the fund. They offer the benefits of diversification, professional management, liquidity and convenience. However, mutual funds are among the most expensive products in terms of loads (upfront, annual & exit fees). The performance of actively-managed funds has always been studied by both investors and scholars. Mutual funds usually have benchmarks such as indexes to assess the fund manager performance accordingly. Previous research did not confirm if the actively managed funds over-perform their benchmarks. In this project I worked on a sample of 5,105 mutual funds. After series of linear regressions, I came up with a conclusion that active management brings about no additional benefits in general. However, the significance of this project is that it was able to spot several situations where active management pays off.
